

# Targets that safeguard biological diversity

TARGET	MISSION STATEMENT	UNIT	KPI 2018	RESULT 2018	KPI 2019	RESULT 2019	KPI 2020	KPI 2021	KPI 2022	KPI 2023
<b>Perform conservation care in NS (nature conservation) areas</b>	Measures in NS areas (Nature Conversion areas that need active care to keep or enhance present values) shall be carried out within the defined time period.	number	3	4	5	6	6	7	8	9
<b>Recreate forest fires, a natural part of the Boreal forest</b>	Burning must be carried out within the defined time period and to the correct extent. 5% of the area harvested for regeneration on dry and healthy ground is to be burned annually (continuously over a 5 year period)	ha	80	176	80	122	80	80	80	80
<b>Predominantly deciduous areas</b>	By 2050, 5% of healthy and moist ground on productive forest land should be predominantly deciduous (areas with > 50% deciduous coverage). The aim is that the area will be increased by 120 ha per year. Base year 2017 = 5071 ha	ha	5 375	5 379	5 495	5 679	5 615	5 735	5 855	5 975
<b>Buffer zones</b>	Buffer zones along more sensitive areas shall be managed in accordance with the target descriptions for conservation measures in forestry operations described by the Swedish Forest Agency (SFA).	%	90	90	91	84	92	93	94	95
<b>Biotopes requiring special consideration</b>	Biotopes requiring special consideration shall be handled in accordance with the target descriptions for conservation measures in forestry operations described by the Swedish Forest Agency (SFA).	%	90	94	91	87	92	93	94	95
<b>Dead wood</b>	High stumps should be created	number	3	3.7	3	3.6	3	3	3	3
